Experience

Consultant at Bravura Sverige- Test engineer- Axis Communications- Lund
March 2017 - Current assignment

Areas - Network, security, streaming, audio/video

Imagine a minefield, a robot/script will take the same path every time a sweep is done, but a test engineer will stray the path and find every single landmine in that field. This is the testing philosophy at Axis and is so far my favorite approach to testing. In order to be a great tester at Axis you have to take part of the great support network on site. All the other testers have fields of expertise and help is always a few steps away. I have grown at Axis and have become a much more confident and exploratory tester.

Test engineer- Sony Mobile Communication AB- Lund
Summer of 2015, August 2015 - June 2016 (Part time), Summer of 2016, August 2016 - October 2016 (Part time)

Areas - Agile project, testing an emerging product, telecom/rcs testing, making test cases

The second half of my time at Sony was spent in a small team. We were developing a brand new feature for some of Sonys biggest European customers. The app could be described as WhatsApp integrated into the Sony UI. Testers and developers worked very closely together and communicated constantly. Before writing and submitting a ticket the developers already knew what the ticket was about and could effectively solve it. I had the opportunity to host T-hours, write my own test cases when new features was created and once again feel pride in providing the end user with a functional product. In the end the project was accredited a GSMA certificate and was rolled out to thousands of end users.

Test engineer- Sony Mobile Communication AB- Lund
Summer of 2013, Summer of 2014, September 2014 - March 2015 (Part time)

Areas - Regression, web testing, making test cases

These were my first tours at Sony mobile. I worked the summers and part time whilst studying for my bachelor. I worked on a small team as a tester for the now retired Sony web browser. This was my first working with test and I had the opportunity to dive head first into writing test cases, do regression testing and maintaining a feature for a customer. I was exposed to new systems and methods of working. I felt pride in verifying the quality of an actual product.

Education

Lunds University- Informatics, 2012- 2015
Holistic IT bachelor degree with a focus on system analysis, conceptualization, creation and maintenance.

Umeå University- Digital imaging, 2016
Beginners' course in Photoshop, 3D modelling and much more.

Programming languages and Software

Work and studies has taught me some of the most common programming languages:
- HTML - Average knowledge
- CSS - Average knowledge
- Java - Basic knowledge
- C# - Basic knowledge
- SQL - Basic knowledge
- Python - Basic knowledge
- Bash - Basic knowledge

I have also worked with several operating systems
- Windows - Advanced knowledge
- Linux - Aveagre knowledge
- Ubuntu - Average knowledge
- Debian - Basic knowledge

Lastly I have worked with these programs,
- Gerrit - Basic knowledge
- Flash Gordon - Average knowledge
- ALM - Average knowledge
- Jira - Average knowledge

Other merits

- Swedish B-license - 2012
- Experienced in Linux Windows and Mac
- Work daily with agile project management (Scrum, Kanban)
